**THAILAND - ECONOMIC OVERVIEW**

With a relatively well-developed infrastructure, a free-enterprise economy, and generally pro-investment policies, Thailand is highly dependent on international trade, with exports accounting for about two-thirds of GDP. Thailand's exports include electronics, agricultural commodities, automobiles and parts, and processed foods. The industry and service sectors produce about 90% of GDP. The agricultural sector, comprised mostly of small-scale farms, contributes only 10% of GDP but employs about one-third of the labor force. Thailand has attracted an estimated 3.0-4.5 million migrant workers, mostly from neighboring countries.

Over the last few decades, Thailand has reduced poverty substantially. In 2013, the Thai Government implemented a nationwide 300 baht (roughly \$10) per day minimum wage policy and deployed new tax reforms designed to lower rates on middle-income earners.

Thailand's economy is recovering from slow growth during the years since the 2014 coup. Thailand's economic fundamentals are sound, with low inflation, low unemployment, and reasonable public and external debt levels. Tourism and government spending - mostly on infrastructure and short-term stimulus measures - have helped to boost the economy, and The Bank of Thailand has been supportive, with several interest rate reductions. Over the longer-term, household debt levels, political uncertainty, and an aging population pose risks to growth.

## **COMMENT**

The company is a leading producer of Methyl Ester, Fatty Alcohol and Glycerin for industrial users. The products are being made from palm and palm kernel oil, these organic products are safe to human and environment. The company operates as a subsidiary of PTT Global Chemical Public Company Limited.

The ME produced at the company's plant is blended with petroleum diesel to create biodiesel, a biodegradable and clean burning fuel than has the same combustion properties as conventional petroleum diesel fuel.

Despite an increase in sales or service income in 2017, it obtained a decrease in net profit comparing to the previous year, mainly caused by an increase in cost of goods sold and operating expenses relatively which eroded the profit margin. Nevertheless, the subject's business remains strong and profitable.
