**EGYPT - ECONOMIC OVERVIEW**

Occupying the northeast corner of the African continent, Egypt is bisected by the highly fertile Nile valley where most economic activity takes place. Egypt's economy was highly centralized during the rule of former President Gamal Abdel NASSER but opened up considerably under former Presidents Anwar EL-SADAT and Mohamed Hosni MUBARAK. Agriculture, hydrocarbons, manufacturing, tourism, and other service sectors drove the country's relatively diverse economic activity.

Despite Egypt's mixed record for attracting foreign investment over the past two decades, poor living conditions and limited job opportunities have contributed to public discontent. These socioeconomic pressures were a major factor leading to the January 2011 revolution that ousted MUBARAK. The uncertain political, security, and policy environment since 2011 has restricted economic growth and failed to alleviate persistent unemployment, especially among the young.

In late 2016, persistent dollar shortages and waning aid from its Gulf allies led Cairo to turn to the IMF for a 3-year, \$12 billion loan program. To secure the deal, Cairo floated its currency, introduced new taxes, and cut energy subsidies - all of which pushed inflation above 30% for most of 2017, a high that had not been seen in a generation. Since the currency float, foreign investment in Egypt's high interest treasury bills has risen exponentially, boosting both dollar availability and central bank reserves. Cairo will be challenged to obtain foreign and local investment in manufacturing and other sectors without a sustained effort to implement a range of business reforms.

## **SUMMARY**

Company Name	: EGYPTIAN MINING QUALITY
Country of Origin	: Egypt
Legal Form	: Egyptian Joint Stock Company
Registration Date	: 2017
Issued Capital	: EGP 5,000,000
Paid up Capital	: EGP 5,000,000
Total Workforce	: 200
Activities	: Owners of a limestone quarry in Minya Governorate and silica sand in Zafarana area in Red Sea Governorate
Financial Condition	: Undetermined
Payments	: Unknown
Person Interviewed	: Karim Yousef, General Manager

## **GENERAL COMMENTS**

**During the course of this investigation the following sources were consulted:**

- Internal database
- Journals, directories, media & web searches
- Local Registry office
- Interview with Karim Yousef, General Manager

In view of subject's infancy, extensive payment and financial records are not available, therefore dealings are recommended to be on secured terms, and a close monitoring of subject's business development is advisable.

## **COUNTRY OUTLOOK**

### **Recent Developments**

The first quarter of FY17 (July to June) marked a slowdown in growth recording 3.4 percent compared to 5.1 percent in the same quarter last year, with annual growth in FY16 registering 4.3 percent. Growth was constrained by severe shortages in hard currency, an overvalued exchange rate and sluggish growth in Europe, Egypt's main trading partner. Key sectors continue to experience negative growth, particularly tourism and the oil and gas extractives sector that has been suffering from underinvestment and arrears.

The annual fiscal deficit in FY16 increased to 12.1 percent of GDP, up from 11 percent the year before. However, in the first half of FY17 the deficit declined to 5.4 percent of GDP, down from 6.4 percent in the same period last year. The improvement in the first half is solely driven by a decline in total expenditures, which compensates for a drop in total revenues. Lower expenditures were driven by a decrease in subsidies and public wages as a percentage of GDP.

The most recent data for the first quarter of FY17 show an overall surplus in the balance of payments of 0.5 percent of projected GDP, compared to a deficit of 1 percent during the same period of the previous year. The improvement in external accounts was mainly due to the narrowing trade deficit induced by an increase in

merchandise exports (by 11.2 percent) and a decline in merchandise imports (by 4.8 percent). Meanwhile, Suez Canal receipts further deteriorated by 4.8 percent and net private transfers also declined by 21.8 percent. As a result, the current account deficit widened to 1.4 percent of GDP compared to 1.1 percent in the same quarter of the previous year. More positively, FDI inflows increased to US\$1.9 billion over the same period, up from US\$1.4 billion the previous year.

To stimulate growth and address major macroeconomic imbalances, the government embarked on a major economic reform program. The key features include (i) the liberalization of the exchange rate regime; (ii) fiscal consolidation through a combination of expenditure and revenue measures, notably cuts in fuel subsidies, containment of the wage bill and introduction of VAT; and (iii) reforms to the business environment and addressing impediments to industrial activity.

The reform program was supported by an IMF Extended Fund Facility of US\$12 billion which contributes to cover Egypt's financing needs, the rest of which has been covered through disbursements under the World Bank, the African Development Bank and a number of bilateral loans, in addition to a recent issuance of Eurobonds in the amount of US\$4 billion. Following the floatation, the exchange rate displayed strong overshooting (hitting its lowest rate of 19.5 in December compared to a pre-float fixed rate of 8.8), but has subsequently strengthened as foreign investor confidence picked up and backlogs of USD orders to finance imports eased. Net international reserves reached US\$26.4 billion at-end January (6 months' imports), up from a pre-floatation level of US\$19 billion.

Currency weakening has led to a sharp rise in inflation, which reached its highest recorded level of 30.2 percent in February 2017. Following the currency floatation, the CBE increased interest rates by 300 basis points (bringing the cumulative increase to 550 basis points since March 2016) to absorb excess liquidity and curb inflation. High inflation has contributed to the aggravation of social conditions, given the persistently high unemployment (12.6 percent in 2016). The recently adopted reform program involves efforts to improve social safety nets, notably through the partial reallocation of freed up resources from reduced energy and food subsidies; the expansion of cash transfer programs; and an increase in the general pension budget by 15 percent. Nonetheless, the mitigation of recent adverse shocks will continue to depend on an effective targeting mechanism.

### **Outlook**

GDP is expected to grow by 3.9 percent in FY17, and will be largely driven by public investment and to some extent net exports. Private investment is expected to pick up only in the second half of FY17, supported by enhanced competitiveness following the depreciation of the currency and the gradual implementation of business climate reforms. Tourism is also expected to steadily recover on the back of a weaker currency. Yet, growth will likely be undermined by slower growth of private consumption, which is expected to be negatively affected by record high inflation rates. Prudent monetary policy is projected to bring inflation down over the forecast horizon after the one off effects of depreciation, subsidy reforms, and the introduction of VAT dissipate.

The fiscal deficit is projected to narrow to 10.5 percent in FY17, contingent on the government's commitment and ability to sustain its fiscal consolidation plan. With the implementation of the VAT, the expected increase in the VAT rate to 14 percent from the current 13 percent, and efforts to improve tax collection, revenues are expected to improve, while expenditures will continue to be contained.

The current account deficit is expected to start improving in FY17, supported by a positive exchange rate effect and an increase in remittances transferred through formal channels.

In the near term high inflation is likely to have negative short-term effects on households. Current efforts to improve targeting in the food smart-card program, currently used to protect the vulnerable population from food

price shocks and ensure a minimum level of food security, could provide additional resources for an improved safety net.

**Risks and challenges**

Policy slippage and absence of real-sector reforms may negatively impact the anticipated economic recovery. Deteriorating security risks can adversely affect the recovery of the tourism sector, traditionally a main source of revenue and foreign currency.

On the social front, resources from fuel subsidy reform to be allocated to social programs may be lower than expected due to currency depreciation, but efforts should continue to improve the efficiency of the safety net system. Sustained high unemployment may lower households' ability to improve their living conditions.

**RATING EXPLANATIONS**

Credit Rating	Explanation	Rating Comments
A++	Minimum Risk	Business dealings permissible with minimum risk of default
A+	Low Risk	Business dealings permissible with low risk of default
A	Acceptable Risk	Business dealings permissible with moderate risk of default
B	Medium Risk	Business dealings permissible on a regular monitoring basis
C	Medium High Risk	Business dealings permissible preferably on secured basis
D	High Risk	Business dealing not recommended or on secured terms only
NB	New Business	No recommendation can be done due to business in infancy stage
NT	No Trace	No recommendation can be done as the business is not traceable

NB is stated where there is insufficient information to facilitate rating. However, it is not to be considered as unfavourable.

This score serves as a reference to assess SC's credit risk and to set the amount of credit to be extended. It is calculated from a composite of weighted scores obtained from each of the major sections of this report. The assessed factors are as follows:

- Financial condition covering various ratios
- Company background and operations size
- Promoters / Management background
- Payment record
- Litigation against the subject
- Industry scenario / competitor analysis
- Supplier / Customer / Banker review (wherever available)
